

Jenkins UI (User Interface)

Introduction

Jenkins is a **widely used automation server** for **Continuous Integration (CI)** and **Continuous Deployment (CD)**.

- **What does the Jenkins UI look like?**
- **What are the key sections of the Jenkins UI?**
- **How do you navigate and use the Jenkins interface efficiently?**

This guide provides an **in-depth understanding of the Jenkins UI** and its components.

Section 1: Learn

Why Is the Jenkins UI Important?

- **Simplifies job management** – Provides an easy way to create and manage jobs.
- **Offers real-time monitoring** – Displays job execution status and logs.
- **Enables user access control** – Restricts access based on roles.
- **Integrates with DevOps tools** – Supports plugin management and configurations.

Key Components of the Jenkins UI

Component	Purpose
Dashboard	Displays all available jobs and system status

Component	Purpose
Manage Jenkins	Configures system settings and security
New Item	Creates new jobs or pipelines
Build History	Shows logs of previous job runs
People	Displays active users and their roles
Credentials	Manages authentication keys and passwords
Plugins	Installs and updates Jenkins plugins
System Log	Provides logs for debugging errors

Interesting Fact

Jenkins UI was redesigned in **2016 with Jenkins 2.0**, introducing **modern UI elements** and **Pipeline visualization**.

Section 2: Practice

1. Accessing the Jenkins UI

Step 1: Open Jenkins in a Browser

1. Open a browser and go to:

`http://localhost:8080`

2. If running on a remote server, replace **localhost** with the **server's IP address**.

Step 2: Login to Jenkins

1. Enter the **admin username and password** created during installation.
2. Click **Sign In**.

Why is this important?

- **Ensures secure access to Jenkins** for job management.
-

2. Exploring the Jenkins Dashboard

The Jenkins **Dashboard** is the **main page** after login. It contains:

- **New Item** – Create new jobs.
- **People** – View users in Jenkins.
- **Build History** – Check previously executed jobs.
- **Manage Jenkins** – Access system settings and plugins.

Try This: Click **New Item**, name your project, and explore available job types.

3. Managing Jobs from the UI

Step 1: Create a New Job

1. Click "**New Item**" → Enter a **Job Name**.
2. Select **Freestyle Project** → Click **OK**.

Step 2: Configure the Job

1. **Source Code Management** – Select **Git** and enter a repository URL.
2. **Build Steps** – Click "**Add build step**" → "**Execute shell**" → Enter:

```
echo "Hello, Jenkins!"
```

2. Click **Save**.

Step 3: Run the Job

1. Click **"Build Now"**.
2. Open **"Console Output"** to check logs.

Why is this useful?

- Confirms that Jenkins is running properly before automating complex pipelines.
-

4. Installing Plugins via Jenkins UI

Step 1: Open Plugin Manager

1. Click **Manage Jenkins → Manage Plugins**.
2. Go to the **Available Plugins** tab.

Step 2: Install Essential Plugins

- **Git Plugin** – Enables Git integration.
- **Pipeline Plugin** – Enables Jenkins Pipelines.
- **Email Extension Plugin** – Sends build notifications.
- **Docker Plugin** – Supports containerized builds.

Click **Install** and **Restart Jenkins**.

Why is this useful?

- Extends Jenkins functionalities to suit project needs.
-

5. Viewing Build History and Logs

1. Click Build History to view past job runs.
2. Select a job to open the Console Output.
3. Review logs for errors or warnings.

Why is this important?

- Helps debug failed jobs quickly.
-

Section 3: Know More

Frequently Asked Questions

1. Where can I change the Jenkins theme or UI settings?
 - Install Theme Plugin from the Manage Plugins section.
2. How do I reset the admin password?
 - Run:

```
sudo cat /var/lib/jenkins/secrets/initialAdminPassword
```

3. How do I enable dark mode in Jenkins?
 - Use the Jenkins Simple Theme Plugin and apply a custom CSS file.
 4. Can I create jobs from the UI and scripts?
 - Yes! You can use Jenkins UI or Groovy scripts for job creation.
 5. Where can I find system logs in Jenkins UI?
 - Click Manage Jenkins → System Log.
-

Conclusion

Jenkins UI simplifies job management, monitoring, and configurations.

**Start by exploring the dashboard, managing jobs, and installing plugins,
and soon you'll be efficiently using Jenkins for CI/CD automation!**
